

Create an MVC Application to Manage Data for School Application

DESCRIPTION

Using ASP.NET MVC project to create a web based application which will allow an admin to do CRUD operations on Student, Subject and Classe tables in the database

Background of the problem statement:

Rainbow School is creating software for school management. After creating the database, the first step is to populate the database using a web-based application.

You must use the following:

Visual Studio 2019 Community Edition

SQL Server 17 Express Edition

Following requirements should be met:

Some of the source code should be tracked on GitHub repositories. You need to document the tracked files that are ignored during the final push to the GitHub repository.

The submission of your GitHub repository link is mandatory. In order to track your task, you need to share the link of the repository in the document.

The step-by-step process involved in completing this task should be documented.

1. First Add An mvc Project After that add school bal, dal, helper library.
2. Here we use connected architecture to perform Curd operation on database.
3. Here we use function, Stored procedure and direct queries to manipulate the database.
4. All the required files are upload on git.
5. Github link provided inside the sourcecode.
